

Millenium Payroll (M3) to TimeWorksPlus Integration

Payroll updates and employee data synchronization between Millennium and TimeWorksPlus

How Integration Works

SwipeClock Millennium Connector transfers data and synchronizes employee information

The SwipeClock Millennium Connector utilizes both the SwipeClock APIs and M3 specific connector code to automatically transfer and synchronize data. Employee information and accruals can be synchronized; time card data and activity reports are transferred from TimeWorksPlus to Millennium.

Employee Profile Data

Employee profile information is synchronized between TimeWorksPlus and M3 with either source serving as master record. Direction of synchronization is set during installation. Employee ID, name and start date are the primary required fields. Field mappings and steps for initial employee updates are detailed in the Connector documentation. Editing or deleting time card punches can be done in either system.

Payroll Time Data

Time card data from TimeWorksPlus can be regularly transferred to M3 during the payroll entry process with the click of a button. Accruals can be calculated in either M3 or TimeWorksPlus with the resulting balances synchronized in the receiving system.

Benefits for Employers and Providers

Employers

Can easily manage employee profiles in either system and have them automatically synchronized to the other. Automation of timecard data transfer and calculation of accruals simplifies processing of payroll and eliminates errors.

Payroll Providers

Automate payroll processing while keeping system data current and available. Put information directly in the hands of those that need it when they want it.
